

A trading name of Vitanium Systems Limited

Could you maintain business as usual in the event of a disaster?

Date: 8/7/2018

Description: Published

ISO: QD419

Rev 2.0

1 ● Know Your Key Products & Functions

In order to protect what's important to your business, you need to identify your key products & functions needed to deliver and meet expectations. Understand where they are vulnerable & threats they face.

2 ● Create a Business Continuity Plan, Document it, Communicate it & Test it

A BC plan should be clearly documented & shared with the appropriate people. Ensure plans are communicated, understood & made available. Train your staff, ensure they are familiar with it, & have confidence in, the BC plan. Test your BC plan through mock scenarios or exercises.

Remember! Test different forms of disruption... adverse weather, human error.

3. Be Assured by Your Suppliers Resilience

At VSL Cloud we take the security & protection of all your data very seriously. All VSL Cloud staff are trained thoroughly on compliance. All control panels are password protected and accessible over 256bit Secure Socket Layers (SSL). Providing users of VSL Cloud services an added layer of confidence that any sensitive information stored on their behalf by VSL Cloud is safe and highly secure. In addition to this, all data has 256-bit AES encryption applied in flight & at rest. Customer data is only stored in USA Data Centers with ISO 27001 Certification. You can have confidence that VSL Cloud is complimenting your BC Plan.

4. Keep Refreshing, Testing & Improving

Aged plans may not work when needed and deemed obsolete. Your BC Plan should be continually reviewed & improved, to keep it up to date.

5. Have a Disaster Recovery Plan

How will you respond when a disaster does strike? Make sure to rehearse your incident response in your test exercises. Have the proper systems in place to ensure that operations will continue in the event of a disaster. This includes staff being able to work remotely, and have access to critical resources if, for example, the physical office is not available.
